

Furniture leads, South lags, and July is the year's quiet spell

A management read on 850 orders: where the revenue and the margin are actually coming from, and what's worth doing about it before Q4.

\$653,619

Total sales

\$205,559

Units sold

Category performance

Furniture isn't just the biggest category — it's the most efficient one. Electronics moves volume without moving margin, and Home & Office is where profitability is quietly leaking.

Bars show profit margin against the 31.3% company average. Furniture also tops the category rankings in dollar terms — \$175,845 in sales and \$67,418 in profit — well ahead of Home & Office's \$150,958 in sales at the weaker margin.

Regional split: East vs. South

East wins on every measure that matters. South isn't just smaller — it's less efficient with what it has.

Product spotlights

The margin extremes worth acting on, by name.

Seasonality

September, December, and April each cleared \$60K in sales. July was the year's low point — roughly half of peak.

Only April, July, September, and December were reported with specific figures in the source data; other months are shown unmarked rather than estimated.

Recommendations, in priority order

- 1 Diagnose South, replicate East.** Bring South's pricing and product mix closer to East's, and check whether the gap is a marketing-reach problem or a localized-promotion problem.
- 2 Make Furniture the Q4 anchor.** It's the best combination of revenue and margin in the portfolio — lead merchandising and inventory planning with it.
- 3 Fix the margin, not the volume, on Home & Office and the LED Desk Lamp.** A pricing or supplier-cost review that closes even part of the gap to the 31.3% average lifts profit without needing a single extra sale.
- 4 Stop treating Electronics as a margin target.** Use it as the traffic driver it already is — cross-sell higher-margin accessories or bundle it with Furniture and Stationery to lift blended margin.
- 5 Plan around the calendar.** Run a promotional push in July to soften the dip, and get inventory and staffing ready ahead of the September–December peak.
